Intrinsic Imaging Awarded International Phase III Clinical Trial for Cystic Fibrosis

International multicenter Phase III trial to evaluate an investigational new drug for the treatment of Cystic Fibrosis.

Bolton, MA / San Antonio, TX

Bolton, MA, San Antonio, TX (PRWEB) July 18, 2012 — Intrinsic Imaging, an ISO 9001:2008 certified and GAMP 5 medical imaging core lab specializing in providing imaging core lab services for clinical trials, announces today that it was recently awarded an important Phase III clinical trial for the study of Cystic Fibrosis (CF).

This international multicenter clinical trial studies an investigational new drug targeted at treating CF. During this trial, Intrinsic Imaging will evaluate Cystic Fibrosis lung pathophysiology to gain insights into the treatment's effect on major manifestations of CF.

"We are honored to have been selected to provide central imaging core lab services for this important Phase III trial for Cystic Fibrosis," said Todd A. Joron, BSc. MBA, President and Chief Operating Officer, Intrinsic Imaging. "We look forward to contributing our imaging expertise in support of treating this systemic and complex disease."

Intrinsic Imaging's team of more than sixty board-certified diagnostic radiologists has subspecialization in all therapeutic areas. The team dedicated to this trial consists of 12 fellowship-trained board-certified radiologists with deep therapeutic expertise in thoracic disease including Cystic Fibrosis, Chronic Obstructive Pulmonary Disease, Emphysema, Interstitial Lung Disease (ILD) and the full scope of pulmonary tumors.

"Intrinsic Imaging's capabilities in evaluating Cystic Fibrosis lung pathophysiology include, but are not limited to, the interpretation and scoring of bronchiectasis, mucous plugging, peribronchial thickening, parenchymal opacities and hyperinflation, among others," said Dr. Amit Mehta, Vice-President, Radiology at Intrinsic Imaging. "Our team has specialized training and expertise in adult and pediatric pulmonary disease and are readily able to provide clinical image management and radiological review for Cystic Fibrosis as well as other pulmonary related clinical trials."

Cystic fibrosis is a rare, life threatening genetic disease marked by the production of abnormally viscous mucus by the affected glands, usually resulting in impaired pancreatic function and chronic respiratory infections. Over time, inflammation and infection cause injury and structural changes to the lungs, leading to a variety of symptoms and in later stages, changes in the architecture of the lung further exacerbate difficulties in breathing.

About Intrinsic Imaging, LLC

Intrinsic Imaging is an ISO certified medical imaging CRO and imaging core lab providing comprehensive services in support of Phase I-IV clinical trials and Class I, II, III medical device trials. Intrinsic Imaging is also a world leader in conducting Artificial Intelligence studies. With its team of more than 650 board-certified and fellowship-trained physicians, Intrinsic Imaging’s team has sub-specialization in all therapeutic areas, including Cardiovascular, Central Nervous System,Gastroenterology, Musculoskeletal, Oncology and Ophthalmology. Certified by the British Standards Institution (BSI), Intrinsic Imaging is the only company in the world to hold five ISO certifications specifically for providing imaging core lab services on clinical trials.
